Just had our unit installed today, firstly Ray was extremely helpful in the information as to size unit etc we needed and obviously knowledgeable and happy to explain everything to us. Installation was arranged for the next week and this was also done efficiently with Aaron of Focus Solar. The whole process was handled with friendly efficiency. I've always been wary of "over the net" sales but can recommend these people. 5 stars.

I can only say solar union was professional and helpful and has kept us up to date during the entire process, including explaining really well what size system we would need and why.
Even on cloudy days we are still making our own power, it's a lot less, but it's still getting some.
The trades have been phenomenal. We had other solar companies come to our house, but these guys were the best by far.

We are really happy.

Solar Union is perhaps one of the most pleasant experiences I have EVER had in dealing with businesses. Ray has been such a gentleman who took me from solar novice to solar owner to Solar Union advocate. I would advise anyone to contact this firm for ANY help on solar.

8 months after installation I had a major issue with the system, causing the system to be offline for around 6 weeks however Solar Union did rectify the situation and replace the faulty/fire damaged components and it's now up and running smoothly again before Christmas

Chris & the Team recently provided & installed a system to our new home. I cannot more highly recommend Solar Union & Chris for his industry knowledge, accessibility to contact & overall professionalism, through out our purchase. Coupled with that, their installers exceeded my expectations, for their tidiness & overall presentation of our finished product. Can honestly say there is no aspect of this experience, whereby I can provide any negative feedback.

We are so impressed with Solar Union from start to finish, they were very thorough and professional. The installers did an absolutely amazing job and answered all our questions in a patient manner, they were friendly, helpful and very tidy in their work, they explained how the system works and set up a monitoring app for us so we can see how effectively our solar system is working and left the site spotlessly clean. We highly recommend Solar Union to anyone who's looking for a great company to deal with.

Having chosen Solar Union to install a new 6.6 Kw system at our house we have no hesitation to recommend this company. We found Ray to be most helpful and nothing was too much for him. He explained everything, recommending the most suitable sized system and guided us through from start to finish. Aaron and Maalik who did the installation were also very friendly, helpful and professional and in my opinion did a first class job. There were quite a few cracked tiles needing replacement and they even left the job and returned after we sourced new tiles with Ray's help. As I said before I highly recommend Solar Union.Thanks to all involved.

I am about to instal my second system through Sue and Solar Smart, now Solar Union, but it will be a third experience with them. My son first researched and installed a 6.6kw system and then recommended to me for my build in 2019. We were both really happy with our systems and especially the service. I am now building again and I did not hesitate to contact Sue to discuss another installation, I have not even bothered to get any other quotes as I know Sue will put forward the best system for my requirements.

I couldn't recommend a better company and service. Highly recommended, wish I could give more stars.

Solar quote and acceptance was completed with Sue Wulff(Sales Representative). Sue was friendly, very knowledgeable, courteous and very prompt on telephone advice, followups and emails. Rhys (Electrician Installer) and the team were very prompt in installing the system. Friendly, cleaned up after themselves. All staff I dealt with are a credit to Solar Union Queensland. Would definitely recommend Solar Union Queensland to family and friends.
